# Dual High-Current Photovoltaic Power Source

## 8A100-1 / 8A100-1 GW

through-hole / gull-wing surface mount

### Features

- Highest Short-Circuit Current of any PVI
- Guaranteed minimum output current
- Logic-Level Compatible Output Voltage
- High Working Isolation Voltage
- Dual Independent Floating Outputs
- Low Coupling Capacitance
- Low Noise
- High Speed
- High Reliability

### Applications

- Floating mW Power Supply
- Isolated Sensor Applications
- Isolated Data Acquisition
- Multi-cell Battery Management
- Metering
- Motor Control
- Inverter and Power Supply
- Medical Applications
- High-Speed Logic-Level Gate Drive

*Note: For a version of this part having higher output current with a higher  $V_F$  drop please refer to the 8A100-2.*

### Description

The 8A100-1 is a dual high-current Photovoltaic Isolator (PVI) milli-watt power source. This device achieves the highest output current of any PVI on the market today while providing a logic-level compatible output voltage.

The relatively high output power of this device, in comparison with other PVI devices, is achieved using a PVI detector array, which is optimized for the voltage level required for powering modern data converters, logic devices, and logic-level MOSFET's.

The true galvanic isolation provides high continuous working isolation voltage, low coupling capacitance, low noise, and high reliability in a compact package.

Pin	8A100-1
1	Input 1 +
2	Input 1 -
3	Input 2 +
4	Input 2 -
5	Output 2 +
6	Output 2 -
7	Output 1 +
8	Output 1 -

### Typical Application

Available Output current for a 3.0V regulated supply with paralleled outputs.

**Table 1 Absolute Maximum Ratings (Ta=25°C)**

Parameter	Symbol	Rating	Units	Conditions
LED Forward Current	$I_F$	100	mA	Steady State
LED Forward Current	$I_F$	250	mA	Peak 10% Duty
LED Reverse Voltage	$V_R$	5	V	
Operating Temperature Range	$T_A$	-50 to +100	°C	
Storage Temperature	$T_S$	-50 to +125	°C	
Power Dissipation	$P_{IN}$	500	mW	
Input-to-Output Isolation Test Voltage	$V_{ISO}$	2500	V	

**Table 2 Electrical Characteristics - Individual Channel (Ta=25°C)**

Parameter	Symbol	Min	Typ	Max	Units	Conditions
Short Circuit Current						
$I_F = 5mA$	$I_{sc}$	13	20		uA	
$I_F = 10mA$	$I_{sc}$	30	44		uA	
$I_F = 15mA$	$I_{sc}$	50	70		uA	
$I_F = 20mA$	$I_{sc}$	65	95		uA	
$I_F = 25mA$	$I_{sc}$	80	121		uA	
$I_F = 30mA$	$I_{sc}$	100	146		uA	
Open Circuit Voltage						
$I_F = 5mA$	$V_{oc}$	3.25	4.05		V	
$I_F = 10mA$	$V_{oc}$	3.40	4.30		V	
$I_F = 15mA$	$V_{oc}$	3.50	4.40		V	
$I_F = 20mA$	$V_{oc}$	3.60	4.50		V	
$I_F = 25mA$	$V_{oc}$	3.65	4.60		V	
$I_F = 30mA$	$V_{oc}$	3.70	4.65		V	
LED Forward Voltage	$V_F$		1.3	1.7	V	$I_F=20mA$
Channel-to-Channel Rejection			40		dB	
Turn-On Time	$t_{ON}$		45		μS	$I_F=20mA$ $R_L=500k$ $C_L=1000pF$ -- See Fig. 5 --
Turn-Off Time	$t_{OFF}$	The photovoltaic array stops generating current within one microsecond of the trailing edge of the LED current. The discharge time is solely dependent upon discharge circuitry and capacitive load.				
Maximum Continuous Working Voltage	$V_{IORM}$	630			V	
Input-Output coupling capacitance	$C_{ISO}$		1.1		pF
