Dionics-USA Introduces Rugged “Combat-Ready” Version of its Photovoltaic MOSFET-Driver

Dionics-USA, the originator of the Photovoltaic (PV) MOSFET-Driver, has just introduced its new “Combat-Ready” surface mount version, part number CR54SM. Company president, Bernard Kravitz, explained that over recent years, high-reliability Military packages for PV MOSFET-Drivers have grown “ever smaller, more fragile, and ever more costly. Expensive but fragile doesn’t make sense.”, he pointed out.

Inspired by the words of Thomas Edison, “There’s a way to do it better - find it.”, Kravitz explained, “We determined to find that better way.” The result is the company’s new rugged surface-mount part, CR54SM – “Combat-Ready”, as he states. “It even looks bullet-proof,” he jokes, “but we haven’t tested for that yet.” Kravitz also points out that not only is the new part physically much stronger, but it is also dramatically less costly.

Kravitz concluded:

“In this increasingly hostile world, we expect many new Military equipment designs to seriously consider replacing the earlier fragile parts with the new ‘combat-ready’ CR54SM device.”
