GAS DISCHARGE DISPLAY SEGMENT DRIVERS

DI-230A DI-240A

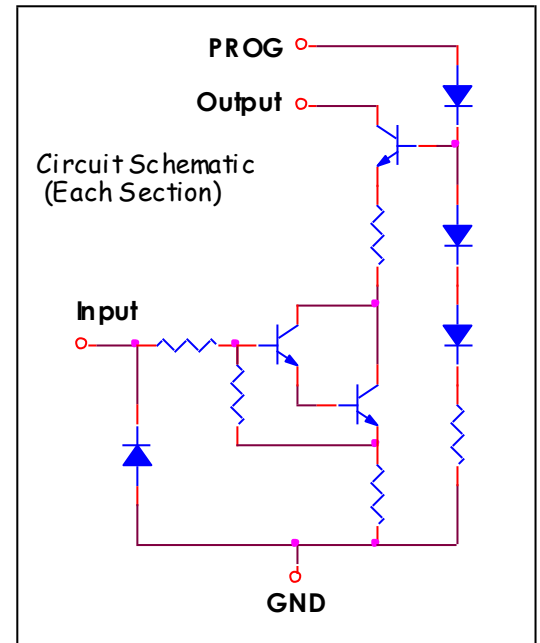

General Description:

The DIONICS DI-230A / DI-240A Series circuits are designed to drive gas discharge display devices from signals originating from MOS or TTL circuitry. Each output is a switched, programmable constant current sink with a voltage compliance of 80 or 125 Volts.

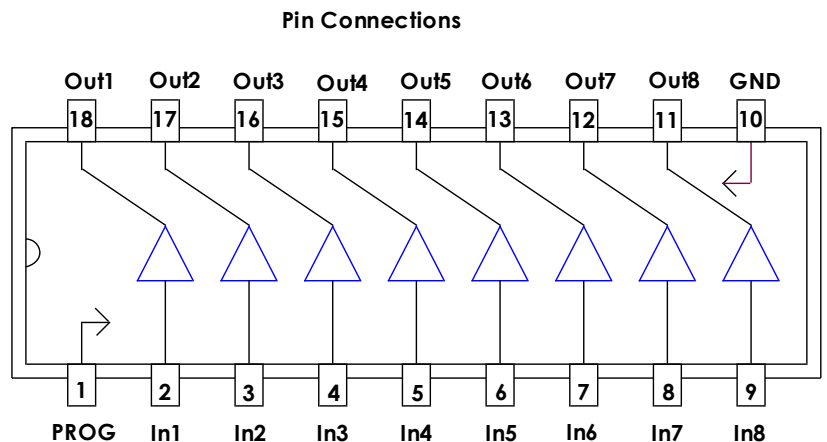

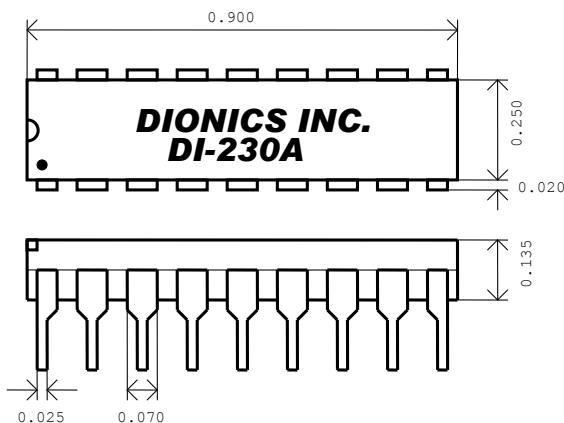

These circuits provide for simple interfaces with displays such as the Beckman, Burroughs Panaplex[®], Cherry or equivalents.

Features:

- ✓ High Breakdown Voltage: 80V or 125V.
- ✓ High Input Voltage Capability: 40V
- ✓ TTL or MOS Compatible
- ✓ All Output Currents Programmed with Single Resistor
- ✓ Requires Few Additional Components
- ✓ Equivalent To DM-8889, MC3491, ITT-505
- ✓ DC Restoring Input Diode
